Description

The ATF-10136 is a high performance gallium arsenide Schottky-barrier-gate field effect transistor housed in a cost effective microstrip package. Its premium noise figure makes this device appropriate for use in the first stage of low noise amplifiers operating in the 0.5-12 GHz frequency range.

This GaAs FET device has a nominal 0.3 micron gate length using airbridge interconnects between drain fingers. Total gate periphery is 500 microns. Proven gold based metallization systems and nitride passivation assure a rugged, reliable device.

 $V_{DS} = 2\ \text{V}$, $I_{DS} = 25\ \text{mA}$.

Notes:

1. Permanent damage may occur if any of these limits are exceeded.
2. $T_{CASE\ TEMPERATURE} = 25^\circ\text{C}$.
3. Derate at $2.9\ \text{mW}/^\circ\text{C}$ for $T_{CASE} > 25^\circ\text{C}$.
4. Storage above $+150^\circ\text{C}$ may tarnish the leads of this package making it difficult to solder into a circuit. After a device has been soldered into a circuit, it may be safely stored up to 175°C .
5. The small spot size of this technique results in a higher, though more accurate determination of θ_{jc} than do alternate methods. See APPLICATIONS PRIMER IIIA for more information.
